

Ultraviolet (UVC) Disinfection of Covid-19 by Nanoparticles

Simple QED <thomas.prevenslik@gmail.com>

5/7/2020 11:42 PM

To: bardaindustryday@hhs.gov

President Trump:

I sent a research proposal - ID: MCM2020-01491 on "UV Disinfection of Coronavirus" to BARDA.

But my emails to: INFO@MedicalCountermeasures.GOV are not being accepted by BARDA !!!

Would you have someone look into this for me?

and

Would you have BARDA arrange a small grant for me described below?

Dear BARDA

What is the status of my submittal ID: MCM2020-01491 ?

Please be advised that Gilead and Moderna Treatments are using Simple QED theory claimed in MCM2020-01491 without crediting my work, and instead both claim Coronavirus is disinfected by complex and unverifiable chemical mechanisms of drugs when in fact the Coronavirus is disinfected by the UV emitted from the surface of the nanoparticles (NPs) that carry the drugs. See nanoqed.org , 2020.

A few weeks ago, I told President Trump in an email that a single intravenous injection of NPs would disinfect the Coronavirus from the UV emitted from the NPs almost instantaneously instead of 11week recovery for remdesivir now claimed by Gilead. But the Media purposely twisted the UV from NPs as a bizarre injection of chemical disinfectants.

I am a retired American living in Berlin and difficult now to travel to the US for any future BARDA meeting. Perhaps, BARDA can arrange a small grant for my working with a BARDA related research group in Berlin to run tests in support of UV disinfection by NPs?
